Applying a Mind-Body Perspective to the Examination of Eating Disorder Symptoms and Related Health Experiences

Kelly Romano

The Virginia Consortium Program in Clinical Psychology
Medical University of South Carolina

November 14th at 4:00pm in 206 Peabody Hall

In this presentation, Kelly Romano will discuss her program of research that focuses on assessing eating disorder symptoms in real-time using naturalistic assessment methods (e.g., ecological momentary assessment, daily diary methods). Specifically, she will present findings from her research that has leveraged naturalistic assessment methods to improve the understanding of state-based associations among mind-body factors (e.g., interoception, affective dynamics, somatic symptoms), eating disorder symptoms, and related health experiences in the everyday lives of at risk and underserved groups, including young women and individuals with sexual, gender, racial, and ethnic minority identities.

If you require special assistance relating to a disability, please contact 662.915.7383 or psych@olemiss.edu at least three days prior to the event.
